## Chicago air crash toll may exceed estimates

CHICAGO (AP) — An infant and a very young child were among those killed in the nation's worst airline disaster — babies who may not have been listed as passengers and included in the count of 273 dead, authorities said Monday.

Dr. Robert Stein, the Cook County medical examiner, said Monday that he has seen the bodies of "an infant and a very young child" in the temporary morgue set up in an American Airlines hangar.

But an American spokesman said shortly after Stein's news conference that the airline knew of no infants aboard Flight 191, which crashed Friday after leaving O'Hare International Airport.

Stein said he didn't know if the discovery of the infant's and young children's bodies raised the death count, or if the two were listed among the passengers and crew.

He said they had not been identified, and he did not know their sex or age.

"We won't know until Dr. Stein identifies them," said Art Jackson of American Airlines. "We don't know of an infant on board. A very young child could have had a ticket. Maybe not. We will revise our records when we know for sure that there are additional deaths."

Stein said he had identified 12 crash victims, but would not release their names pending formal notification of their relatives.

Pathologists, dentists and other investigators have worked since Friday to identify the bodies found in the debris of the demolished DC-10.

Earlier Monday, about 1,100 mourners gathered within earshot of O'Hare for a memorial service for the 273 persons who died in the crash.

And in Washington, the Federal

Aviation Administration ordered all U.S. airlines to perform safety checks on DC-10s or else ground them at 3 a.m. EDT Tuesday. It appeared most of the planes in question would be inspected before that deadline.

Pope John Paul II sent special condolences to the families of the victims. A telegram sent on his behalf said: "Holy Father deeply grieved at news of air tragedy that has struck Chicago area. He prays for those who have died and expressed his heartfelt sympathy to the families of the numerous victims, asking God to sustain them in this hour of great sorrow."

Officiating at the midday service were Cardinal John Cody, Rabbi

Judah Graubart and the Rev. John Keough, chaplain at O'Hare.

About 1,100 persons attended the service at Mary Seat of Wisdom church in suburban Park Ridge.

About 40 relatives of crash victims occupied the reserved front pews during the service. Overhead could be heard the sounds of planes landing and taking off from the airport.

None of the 271 persons aboard American Airlines Flight 191 from Chicago to Los Angeles survived the crash. Two persons on the ground were killed when the jumbo jet rolled over on its side just seconds after take-off and flew into the ground, crashing on her nose and a wingtip and flashing into flame.

The plane's left engine tore loose and smashed down on an O'Hare runway before the crash, and investigators are trying to determine how the loss of the engine was connected to the crash. A broken bolt from the engine mounting was found in grass beside the runway, and its loss apparently caused the engine to fall off.

At the crash site Monday, Elwood "Woody" Driver, vice chairman of the National Transportation Safety Board, said the two remaining engines on Flight 191 were "at full power" when the crash occurred. He said the two engines should have provided sufficient power to keep the DC-10 in the air.

## Tips for saving energy suggested for students

By MICHELE SADLER and TOM SMYLY  
Universe Staff Writers

Use what you need, but need what you use, a power specialist advises BYU students about their use of energy.

Ray Walker, customer service manager for Utah Power and Light Company in American Fork, said that the biggest conservation problem students face is awareness. "If they would just be aware of the little things when they use energy, they could save energy," Walker said. Students should use common sense in their use of energy and should also consult the information that is available to them about energy conservation, Walker added.

A variety of pamphlets about energy conservation are available from consumer outlets, power companies, private businesses, and from the Ombudsman's Office on campus.

One pamphlet published by Utah Power and Light helps customers determine exactly where electrical energy is being used in their homes. Customers can then decide where they can best conserve energy. "With this energy crunch on, we are going to have to change our habits," Walker said.

One major problem in energy conservation is load management, Walker said. Load management means the handling of electricity demands. The problem is that at several peak periods in the day, people use more electricity. These periods are about 8 a.m., noon, and in the evening. If fewer people

used power during these peak demand times, electricity could be produced more economically, Walker said. "If we could get customers to not do their cooking and washing during these peak times, we could delay two years investment in a 400,000-kilowatt generating plant," Walker said. "This would mean two more years between the building of power plants."

"Take care of clothes," Walker said. "If clothes are kept clean by hanging them up or putting them away after use, less energy is used in washing and ironing them." Energy can be saved by setting the wash temperature as low as possible. Also, avoid overdrying clothes.

In addition, energy can be saved by first ironing those fabrics that require lower heat settings. The iron should be turned off five minutes before finishing ironing. The remaining heat in the iron will finish the job.

Students can save money by making home improvements themselves. Doug Hansen, owner of a home insulation business in Lehi says, "If students are paying their own fuel bill, they should learn to caulk and weatherstrip their own homes, if it's not too expensive."

Reviewing and changing habits of appliance use can also save energy. Many blow dryers consume as much energy as an electric toaster and for longer periods, according to Utah Power and Light. Full or partial towel drying of hair can save electricity.

Better management of the refrigerator can help students save on electrical bills. Refrigerators and freezers should be filled to capacity but should not be overcrowded. Air circulation is needed for efficient cooling.

Uncovered liquids in the refrigerator also add to the work load of the compressor. Leisurely inspections of refrigerator contents also require more energy to replace the cool air that spills out. Manual defrost freezers should be defrosted when frost in the freezer is one-fourth inch thick to maximize freezer efficiency.

Microwave ovens use about half the power of regular ovens in electric ranges and for a much shorter period of time. However, defrosting of meats and other foods should be done in the refrigerator rather than in a microwave oven, said Walker. The coldness of the food helps the efficiency of the refrigerator and at the same time saves the energy that would be used in the microwave.

Small amounts of food can be prepared with more energy efficiency in small electrical appliances like toaster ovens. According to Utah Power and Light, these smaller appliances use only about one-third the electric power of the oven broiler.

Students can keep their apartments cool this summer and save energy, too. The cooling thermostat should be set as high as comfort will permit. Blinds, shades, and drapes should be drawn to block the sunlight during the hottest part of the day.

A small change in habit, like taking a shower instead of a bath, conserves energy.

Some changes in lighting can save energy. Lamps can be arranged for lighting efficiency. Cleaning lighting fixtures will increase their lighting efficiency. Light-colored walls should be kept clean so that they can reflect as much light as possible.

## Honoring war dead

Memorial Day, or Decoration Day, offers both young and old the opportunity to reflect upon and remember those soldiers who have died in past wars. One small girl pauses to study the grave marker at a local cemetery, of Percy D. Angel, World War II soldier.

The holiday was originally an occasion for decorating the graves of soldiers killed in the Civil War, but since World War I, as a day commemorating also those who died in later wars.

## Budget battle brewing

WASHINGTON (AP) — House liberals, still upset with the 1980 target budget, are vowing to carry their over-against battle into the next session of the congressional budget process—the appropriations bills.

When the House returns from its Memorial Day break Wednesday, the appropriations Committee will begin working on those bills to pay for government programs in fiscal 1980, which starts Oct. 1.

Leading liberals made it clear last week that they will try to amend House money bills to reduce spending for defense and boost it for social programs.

Rep. David Obey, D-Wis., who led a liberal revolt against the target budget, said critics of higher defense

spending and social program cuts should focus on "the real questions" in the appropriations bills.

House liberals had joined with conservatives, upset with continued deficit spending, to block temporary approval of the \$532-billion target budget last week. It was finally passed Thursday by a six-vote margin.

Although the target budget only sets tentative spending levels for broad categories of government programs, its approval last week was necessary before Congress could begin appropriating money.

The 1980 target budget closely parallels President Carter's spending recommendations.

The House will also return from its

Memorial Day break to continued debate over the president's plan to phase out domestic oil price controls starting Friday. The decontrol is expected to lead to higher oil and gas prices.

The Senate is not scheduled back from its Memorial Day recess until June 4.

Despite an overwhelming vote in the House Democratic Caucus last week against the president's decision, decontrol opponents concede they will be unable to block the action before Friday.

However, aides to Rep. Toby Moffett, D-Conn., say he will try to tack an amendment onto an Energy Department authorization bill this summer that would restore controls.

## A-bomb tests left legacy of death, misery

**EDITOR'S NOTE:** This is the first in a three-part series on recent findings relating to atomic testing in the 1950s and its effect on southern Utah residents. Today's article discusses the background of the tests.

By CINDY GONZALES  
Universe Staff Writer

Eleanor Webb is dying of cancer. Six years ago she discovered a lump in her breast and since then, the cancer has spread throughout her body. Doctors estimate she has months to live. And she uses her remaining time enjoying her husband, family and her land.

"I see those red cliffs up there?" she asks. "The other day some boys removed some of the biggest arrowheads I've found around here."

Neighbors share the same joy for the deep red soil of southern Utah. They have lived in the little town of Panguitch (pop. 200) most of their lives. They also share the same fear that the tests at anyone when the word "cancer" is spoken. The people of Leeds watched 17 of their neighbors and relatives become sick and die from cancer in the past two decades.

### Tests 'harmless'

They believe this cancer "epidemic" began when the first atomic bombs were tested 120 miles away in the Nevada desert in the 1950s. At that time, the Atomic Energy Commission told the people of southern Utah the tests were harmless. Now many of the people are convinced that the government knowingly exposed them to radiation and covered up the potential health risk.

The sentiment of the people in southern Utah came to a head in a town meeting conducted by Sen. Orrin Hatch April 17 in St. George. Testimonies from the town meeting

were submitted to the formal U.S. hearings in Salt Lake City two days later. Said Hatch at the hearing: "A crime has been committed within our state and many of you or your loved ones have been or are now the innocent victims of mistakes made by government officials over a decade ago."

### Should be tried

Kay Millett from Cedar City lost her three-year-old daughter to leukemia. She was outraged. "I think the people who were responsible in the Atomic Energy Commission, people I paid money to do this, should be brought to trial and tried and prosecuted as murderers... whether or not they admit it or not. I am sure that radiation is the main cause of our cancer."

The general feeling in southern Utah is that the government recognized hazards of low-level radiation, but were more concerned with meeting deadlines than with the safety of people downwind from the atomic blasts. These feelings are supported by documents entered before the Joint Congressional Subcommittee investigating the effects of radioactive fallout in a hearing held in Salt Lake City April 19.

The previously classified documents were requested from the Department of Defense by Sen. Edward Kennedy, D-Mass. Kennedy, chairman of the Senate Subcommittee on Health and Scientific Research requested the documents after 600 damage claims had been filed with the Defense Department by cancer victims and their families.

In November 1978, Utah Governor J. Ott Matheson requested President Jimmy Carter to direct other government agencies to release information concerning the testing program.

Monitoring reports from 1953 and 1955 show that commission members were primarily concerned with keeping testing deadlines without interference or delay. The documents also show that while the commission was concerned about safety, it was uncertain of how dangerous low-level radiation really was. At times, the documents revealed, it seemed the commission deliberately minimized any risks from atomic fallout in order to curb public alarm.

### Take a chance

A diary kept by Gordon Dean, chairman of the now-defunct AEC, was used in testimony during the hearings in Salt Lake City. An excerpt from his diary reads: "Yield is so important we will have to go ahead; we will just have to take a chance." Another entry reveals that in 1953, during A-bomb tests, President Dwight D. Eisenhower told the AEC to keep the public "confused about fission and fusion."

AEC Commissioner Thomas Murray said, "We must not let anything interfere with this series of tests — nothing."

### Lost 10

Elmer Pickett has lost 10 family members, including his wife Viola, to cancer and leukemia. "This type of misleading and lying cannot happen again," said Pickett. "The time has long since gone when public officials hid behind the skirts of the government. I've never lost faith in the government. But we've got people in our government who I am not proud of. And they have to be corrected. It was necessary to test the bombs, but was it necessary to put the bombs above the safety of the citizens?"

Pickett, a practicing Latter-day Saint, comes from pioneer stock. His

father and grandfather were pioneer morticians in southern Utah, and Pickett himself practiced the profession for a short time.

Once, he and his father went back through their records and could not recall a single leukemia case in a great number of years previous to the atomic blasts. Pickett said only a small number of people in the area died of cancer.

Newsweek magazine quoted Pickett as saying, "I felt safe. I trusted the government — now I feel used."

### New and exciting

Faith in the integrity of the government was not an unusual thing during that time. One Leeds resident described the tests this way: "The tests were new and exciting. When the AEC told us no harm would come to us we believed them. My children used to walk to school while this big pinkish-gray cloud from the bomb would float over their heads."

Because of AEC assurance, there was little fear or panic when the first three bombs were set off on Jan. 27, 28 and Feb. 1, 1951 on the Air Force's 5,000-square-mile bombing and gunnery range known as Frenchman's Flat, 100 miles northwest of Las Vegas.

The location for the A-bomb testing had been recommended to the Department of Defense by the AEC in a December 1950 meeting.

Of all other areas considered for the testing, Frenchman's Flat seemed ideal because the land was government owned, the problem of radiological safety was lower since the population within a 125 mile radius was smaller than the five other areas considered. Also transportation and base facilities were excellent.

The AEC reported no radioactive

contamination of nearby areas, although planes were instructed to keep 150 miles away for several hours to allow the radiation in the atmosphere to dissipate.

Although the first atomic test in Nevada took place Jan. 27, 1951, monitoring of the tests did not begin until the U.S. Surgeon General requested the U.S. Public Health Service to do so beginning March 17, 1953. By that time 20 A-bombs had already been exploded.

The first monitored explosion measured 0.55 rems in St. George.

The rem is a unit of measurement that indicates the extent of biological damage to human cells rather than the actual intensity of radiation. A single chest X-ray exposes a person to approximately 11-45 millirems in a few seconds. Since a rem is quite a large quantity, experts use millirems—one millirem is one-thousandth of a rem. The Environmental Protection Agency sets five rems a year as an acceptable occupational dosage that might be safely tolerated.

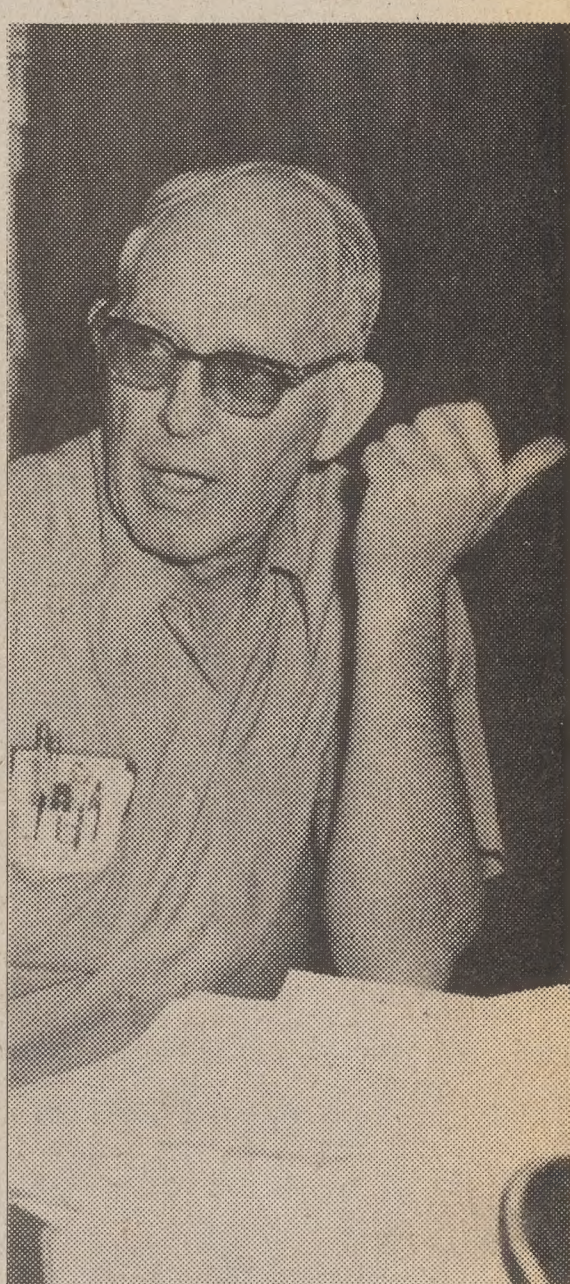

Many test measurements exceeded that limit during a single explosion, and after each test, residents in southern Utah accumulated additional dosage.

March 24, 1953. The test shot "Nancy" was detonated. The detonation was equivalent to 24,000 tons of TNT.

May 19, 1953. The detonation tagged "Harry" yielded a total of 32 kilotons, or 32,000 tons of TNT.

It was in a June meeting when the AEC first realized that public support of the program was beginning to dwindle.

Next: Livestock and sheep mysteriously die.

ELMER PICKETT . . . "It was necessary to test the bombs, but was it necessary to put the bombs above the safety of the citizens?"

# Burglars foiled, crime deterred by Provo Police prevention plan

By SHARON MONTGOMERY  
Universe Staff Writer

The warning to robbers and burglars posted outside several local businesses by Provo Police is not intended to scare the public, but to let possible thieves know that an unmarked car may be just around the corner or the clerk behind the counter may really be a police officer.

The warning states "Robber/Burglar: This is a stake-out location. When challenged by police do not move or turn. Drop weapon and raise your hands immediately."

The signs are part of a new crime prevention program involving stake-outs and sophisticated equipment. Unmarked cars with plain clothesmen keep close surveillance of frequently robbed or often-burglarized businesses. Located in the business may be a heat sensing device which will alert the nearby car.

Certain businesses, such as all-night stores, may arrange to have a police officer, armed and ready to make an arrest, pose as a clerk.

A regular clerk or gas station attendant may carry a small warning

device in his pocket which can notify police of a theft attempt with the push of a button. By stepping on a pad on the floor, an employee can trigger another alarm.

Simply removing specially placed cash from the register can set off an electronic sensor placed underneath the bills, notifying police of a robbery.

If a robbery attempt results in a hostage situation, Provo Police can call on their five-man tactical squad using specialized equipment such as a 12-gauge semi-automatic shotguns.

"When people get thinking about robbery or burglary, we want them to know they are playing with their life," said Sgt. Robert Dyer of the Provo Police Department. "We are simply not going to tolerate these crimes, we are going to arrest and we are going to incarcerate."

Since the program began in April, the only two robberies attempted at stake-out locations resulted in immediate apprehension, Dyer said. He described how in one case the suspect admitted to police that if he had noticed the warning sign he wouldn't have tried anything.

Universe photo by Michelle Gingrich

An employee of a local business displays a device used to alert police in the event of an attempted burglary. Since the program began in April, the only two robberies attempted at stake-out locations resulted in immediate apprehension, Provo Police Sgt. Robert Dyer said.

Universe photo by Michelle Gingrich

Provo Police Chief Swen Nielsen explains the use of an instrument used in a new crime prevention program aimed at curbing robberies of local businesses. "When the police receives an alarm from any of these devices the call is given first priority and an officer can be there within minutes," Nielsen said.

## The Universe

The Universe is an official publication of Brigham Young University and is published as a cooperative enterprise of students and faculty. It is produced as a laboratory newspaper in the Department of Communication under the governance of a Management Team and with the counsel of a University-wide Universe Advisory Committee.

The Universe is published Monday through Friday during the fall and winter semesters except during vacation and examination periods. The Universe is published Tuesdays and Thursdays during the spring and summer terms.

# Spring Fling features concert

By CARRIE FARNES  
Universe Staff Writer

To take advantage of sunny weather and empty wallets, the ASBYU Social Office is sponsoring a free outdoor concert and movie June 1 at 8 p.m. in the ASB quad.

The "Spring Fling" will feature singer Elaine Thatcher, the movie "True Grit" and free popcorn during intermission.

"A lot of the student body think the Social Office nickle and dimes them, but this is one activity that shows the Social Office really works for them," Wess Larson, Social Office vice president, said.

Elaine Thatcher, who presently makes her home in Salt Lake City, is little known in the professional realm. She recorded her first album in the summer of 1978, "Elaine Thatcher," with strong style influences from Joan Baez, Bob Dylan, Judy Collins, Joni Mitchell and Marvin Payne.

Miss Thatcher began singing for community groups while in high school in the 60s, but began her combination of vocal and guitar while living at Helaman Halls. She transferred to Colorado State after one year at BYU and began entertaining professionally for clubs, conventions, civic and church groups; sometimes as a solo entertainer, sometimes with groups.

It was during this period when she began to study voice. She has had five years of formal

vocal training, performing the classics as well as popular music. She said she thinks of the voice as "a fine instrument which must be carefully tuned and correctly used in order to achieve the fullest extent of its beauty and potential for expression."

After graduating from college, Miss Thatcher moved to Utah, where she worked as an interior designer and dropped out of professional music after a few appearances. However, she remained active, performing for local non-profit groups and for friends.

In the summer 1978, she was persuaded to return to the professional world of music. She recorded her album, and began performing at universities and in clubs.

She chooses songs that have "strong melodic content, thoughtful lyrics and is equally at home with the old standards of the 30s and 40s, the traditional folk songs of the western culture and the popular music that is being written today," Larson said.

Miss Thatcher said she anticipates a "non-flashy" presentation of

folk hits for her coming concert. Locally she has performed at the University of Utah, Westminster College and various clubs throughout Salt Lake City.

Miss Thatcher said she considers herself a woman of three priorities, with outside interests in interior decorating and missionary work. "I've known too many people

destroyed in the competition of show business. It is just a worth destruction."

A piano, electric bass and electric guitar will accompany her voice and guitar, Larson said.

# Texas downs Y in regional

By RUSS DAVIS  
Universe Sports Writer

The stage was set, No. 1 ranked Texas against the Western Athletic conference's best, Brigham Young University.

A crowd of 5,200 fans gathered to watch the host school, Texas, fight it out with the Cougars for the automatic berth to the College World Series in Omaha, Neb.

Texas followed the winners bracket Monday night's showdown while BYU was forced to follow the losers bracket after Friday's opening round upset to little Lamar University. Texas put away Pan American 4-2 and Lamar 6-4 to remain undefeated in the tournament while BYU was bouncing back from Friday's 3-2 loss to Lamar to eliminate Pan American and Lamar in advancing to the Texas showdown.

Texas attacked early in the game and never let up as they won the contest 6-2.

The victory gave Texas the Central regional title and a trip to the College World Series.

For Texas it was their 53rd victory against six losses. For the Cougars it was their third straight do-or-die game in the double elimination tourney. The loss left the Cougars with a 50-25-1 record and it marked the end to a fine season in their first regional appearance.

Texas scored early when leadoff man Joe Bruno was walked by starter Bert Bradley. Bradley then retired the next

two before Terry Salazar hit a triple to score Bruno in the first inning.

Texas went on to score four more runs before the Cougars got on the scoreboard.

BYU's scores came with two outs with the score 5-0 in the bottom of the sixth. Ken Clayton hit a triple and then Cliff Pastornicky followed with his 13th homer of the season to give the Cougars their two runs.

Texas scored one more run in the seventh when Kem Wright limited the Cougars to five hits and earned his eighth victory against one loss.

"It was a tough regional," said Cougar coach Gary Pullins. "They simply outplayed us tonight. Bradley needed another day of rest," he said.

Pullins said "Tom Morris was sharp in the last two innings of play. If we had started Morris tonight and Bradley tomorrow it might have been a different story."

In Monday's first game, BYU avenged its earlier loss to Lamar by downing the Cardinals from Beaumont, Texas, 7-4.

Southpaw Axle Hardy was the story for BYU as he limited the Cardinals to seven hits to win his eighth game of the season.

"Axle Hardy had a superb pitching performance today," said Pullins. "If we can continue to get good pitching and good defense we can win this thing," said Pullins after Monday's first game.

The victory over Lamar gave the

Cougars its magical 50th victory of the season — a goal established earlier by Pullins and his team.

In Saturday's game, senior Tom Morris pitched a complete game to give the Cougars a must victory. The left-hander held the Broncos of Pan American University scoreless for eight innings while his teammates put the game away.

"Morris threw a super game," said Pullins. "He held them off for six innings until our hitting could catch up." The Cougars scored 10 runs in the last three innings.

## Ohio State wins golf; Y takes 4th at NCAA

By CARL HAUPT  
Universe Sports Editor

Ohio State came from behind during the final day of competition Saturday to win the NCAA golf championship at the Bermuda Run Golf and Country Club in Salem-Winston, N.C.

Defending national champion Oklahoma State, placed second after leading the field during the first three rounds of play. Wake Forest finished in third place behind the play of Gary Halberg, who took the individual honors in the tournament.

BYU took fourth place, and the Cougars' Bobby Clampett was second in the individual category. "We're very pleased. Bobby (Clampett) took second in the individual competition. We're all back next year and I can't see anything but good things happening to us next year," said BYU coach Karl Tucker.

Ohio State won the tournament with a team score of 1,189, barely beating out Oklahoma State which finished with score of 1,191. Wake Forest finished with a 1,196 and BYU had a team total of 1,198.

New Mexico took fifth place, followed by Oral Roberts, North Carolina, Arizona State, Houston and Southern California, to round out the top 10 teams.

BYU was in contention for the title from the beginning of the tournament

"We lost the tournament when we lost the first game," said Pullins. "It took a lot of courage for our kids to come back and win like they did. I am proud of everything that has happened here and I am proud of everything the kids did.

When you win 50 games, the WAC championship and you come to the regionals it's quite an accomplishment. It's something you don't do every year," said Pullins. It was the last game for eight seniors on the BYU team.

## Timp Cave rock formations popular tourist attraction

By CLIFF ELEY  
Universe Staff Writer

Those who don't mind some climbing for an interesting tour will enjoy visiting Timpanogos Cave, operated by the National Park Service.

Timpanogos Cave is located two miles up American Fork Canyon. Admission is 50 cents for those over 16 and is free to children when accompanied by an adult. Bob Mack, Timpanogos Cave tour guide, says people from all over the world have seen the cave. "We had some people from Germany up here yesterday and some folks from Israel

were here today," he said.

The cave is actually a series of three caves connected by man-made tunnels. "The first cave was found in 1887 by Martin Hansen while tracking a mountain lion," Mack said. "The other caves were found and the caves were first opened to the public in 1921."

Timpanogos Cave contains stalactites, stalagmites and rare mineral formations called helictites. "The caves aren't famous for their size or for their color, but they are known for their rock for-

mations," Mack said. "The helictites are not found in too many caves."

The hike to the cave and the tour takes about three hours. "It takes about one hour to hike up there," Mack said. "A guide meets you and takes you on the tour which lasts about one hour. You see about 90 percent of the cave."

The trail leading to the cave is about 1.5 miles long and rises 1,065 feet. People with heart conditions are warned the climb is somewhat rigorous. "There is no age limit," Mack said. "We had a guy that was 92 climb it last year, and he made it with no problem at all. We've had little children climb it too."

More than 5,000 people a week visit the cave during the busiest times of the season. "Our peak weeks are Memorial Day, the Fourth of July, July 24 and Labor Day," Mack said.

Gov. Scott M. Matheson's emphasis on gas conservation may increase the number of in-state tourists visiting the cave. "I think more local people will come up because of the gas shortage," said Daryl Cook, chief park ranger.

Summer positions available

While the unemployment rate in the United States is usually high, employment at BYU is possible for anyone who is willing to work, according to one BYU official.

"If students are willing to work, they can," said Lura Pospical, supervisor of Student Employment. Noting one of the problems which must be dealt with, she added, "Many students have bad schedules or are only looking for a certain kind of job which limits their chances of finding work."

Miss Pospical said the situation this spring is unique because most campus jobs are filled, but she anticipates a turnover between spring and summer terms opening up jobs. "A student looking for work should come to the office two weeks before the term or semester begins. This gives us a chance to get to know the student," Miss Pospical said.

While preference is given to those students enrolled full-time during spring and summer, other students can get on-campus employment by being registered in at least one class. "This does not include audits, home study courses or incompletes," Miss Pospical said.

Jobs with food services and the grounds and custodial departments are open to individuals who are not attending school, as long as they will be full-time students during the fall semester. This includes high school graduates who will be coming to BYU, Miss Pospical said.

During spring and summer terms, students may work up to 40 hours per week if carrying less than four and a half credit hours per term.

A student wishing to work must have a social security number, Miss Pospical said. A student not having one, can get information on obtaining one from the employment office, C-40 ASB. Also, at least four hours of free time should be worked in with the student's schedule, she said.

Information on off-campus jobs can also be obtained at the employment office. The jobs are posted on a bulletin board inside the office.

"Hopefully we can maintain qualified students in the best jobs available on campus," Miss Pospical said.

# Hospital inmates self-guarded

**EDITOR'S NOTE:** This is the second of a three-part series on the Utah State Hospital in Provo. Part two deals with the security system of the institution.

**By STEPHANIE SQUIRES**  
Universe Staff Writer

Utah State Hospital has no fences, no guard towers, no dogs or alarms. The grounds are green and open.

There is one security guard; all other security is handled by the patients themselves. An apple orchard stretches southeast behind the building housing patients in Ward 56.

Ward 56 is the hospital's "Forensic Unit." Patients in this unit are sent there by the courts as an alternative to going to prison or for psychiatric evaluation during a trial. Such was the case with Steven Kaniewski, a 23-year-old 30-day evaluation patient.

Kaniewski was at the hospital for psychiatric evaluation to determine if he was capable of standing trial on a charge of first-degree murder in connection with the killing of a Bountiful Jeep Posse member. He pleaded guilty to the crime last week.

Patient escape

According to police reports, on May 7 at 9:40 p.m. Kaniewski and another patient escaped from the hospital by climbing out a third-story window onto an air

conditioning unit and then onto the roof.

Provo City Police were called but were unable to apprehend the two men who escaped by running through the adjacent apple orchard.

Detective Glade Terry of the Provo Police Department said five to seven minutes probably elapsed before the police got there. "Everybody did as much as could be expected."

Four-day freedom

Kaniewski was not caught until four days later. He had stolen a truck and driven to Rawlins, Wyo., where a girlfriend called authorities and told them he was there, according to police files.

Was Kaniewski able to escape because the hospital lacks a sophisticated security system? Robert Wallis, an attorney with the Utah Criminal Justice Department, says it may not be so much a lack of security as the hospital's procedure itself.

Dr. David A. Tomb, a psychiatrist at the hospital, said, "The dilemma is that they're a threat to society. So should they be locked up or are we responsible to give the individual the best evaluation possible? We can't do that while he's locked in a cell.

"We don't want 30-day isolation even for security reasons, because we must observe how they interact with patients and hear what they say," Tomb said.

"If we keep watching, we may find a ritual motion that he goes through which would indicate another world going on inside his head."

Security question

The question is whether the security system is adequate and effective enough that local residents are not threatened by the possibility of possibly dangerous patients escaping.

At the hospital, patients are the security force. A document drawn up by the patients of Ward 56 outlining their program states, "Security is a body of people from the ward who, because of their being responsible and positive towards their treatment by working on their problems, earn first 'hallwatch,' then 'special duties' and then 'posse.' Security is the eyes and ears of the ward. They are responsible for preventing patients from harming themselves or others, by anticipating problems."

Patient 'posse'

Because of their commitment to this responsibility, patient posse members feel there is no need for bars on the windows or guards.

Posse members have a close working relationship with the staff. Dennis Cullimore, unit program director for Ward 56, says, "Staff and Security work very closely together. The patients understand each other, have the same mentality. They

live together and might be able to spot something and realize sooner that something is going to happen."

"Patients and employees take a lot of pride in the security system," Cullimore says in a situation like Kaniewski's escape, "the other patients feel taken advantage of."

"Posse takes care of staff, other patients and the community," said Dr. Seymour Steed, programs administrator of the hospital.

AWOL's a setback

The hospital believes in its system. Patients work hard to help each other and themselves get well. To be a posse member, a patient has worked hard to overcome his problems and he has proven himself responsible. An escape or AWOL is a great setback to the ward and the atmosphere is tense for some time after, Steed said.

Jackson Schultz, a 20-year-old public offender patient (P.O.P.) for the past eight months and floor captain of Ward 56 says, "Every time there's an AWOL, we tighten security. The wards and unit suffer."

"Kaniewski didn't just walk away from the hospital like the T.V. said. T.V. said everything negative, nothing positive. Sometimes there are mistakes."

Press criticized

Schultz said he is upset the press said hospital security was

lax. "It's hard to hear them put us down," he said.

"Rounds are made on the ward every 15 minutes," he said. "There's integration, where a security member is present while another patient has a visitor."

"When a new person comes to the hospital a security member is responsible to be within five feet of him for an established amount of time."

The hospital security system does not involve guns, and no one is allowed to carry firearms into the unit.

"Employees are not trained in security," Cullimore says. "There are no firearms. Trained staff and patients are, however, able to restrain someone without hurting them."

Gail Houle, a 27-year-old P.O.P. says, "Guns are totally unnecessary."

"No guns are necessary," says Schultz. "You know, people in here know how to get a gun away and use it too."

## Highest honors presented to Y at film festival

**By GENE SCHMIDT**  
Universe Staff Writer

Two BYU films have won the highest award in two categories at the U.S. International Industrial Film Festival.

According to Darrell Stoddard, director of Media Marketing for BYU, the films entitled "The Gift," adapted from a story by Pearl S. Buck, and "The Bridge," a parable of the atonement, were the winners. Both films also won this year's CINE Golden Eagle Award in Washington D.C.

The competition facing BYU in the festival included CBS, IBM, Prentice-Hall Media, McGraw Edison, Government of Saudi Arabia and Honeywell. The two BYU films, one of which is a student film, placed higher in international competition than films produced or sponsored by the above members of industry.

Of the two winners, "The Bridge" is better known. It is a story about a railroad bridge operator who must choose between the life of his young son or the lives of passengers on an approaching train. A film reviewer for "Today's Catholic Teacher" (Feb. 1979 issue) said of "The Bridge," the "cumulative effect of all the sermons and homilies I have ever heard or read on the Atonement could not match the power of 'The Bridge.'"

On the university level, there are only two other organizations that compete with BYU in making films. They are the University of California Extension Service Center and the University of Indiana at

Bloomington. Stoddard stated BYU "outsells both easily." In support of this statement, he mentioned the fact that the University of California sells approximately 70 copies of its best selling film a year as compared to BYU's "Cipher in the Snow" which sells an average of 40 copies a month.

In the last 10 years, BYU films have won 75 national and international film awards. "Awards add tremendously to our stature and sales," Stoddard said. Major customers for BYU films include many of the school districts in the United States, universities and many religious denominations.

Among the best customers are the Southern Baptist Church, Seventh-day Adventists and the Lutheran (American and Missouri Synod) Churches. The American Lutheran Church, for example, purchased 98 copies of "Cipher in the Snow".

The major goal of Media Marketing is to market and distribute media products to institutions outside the LDS church.

### ASBYU positions now available

Applications are still being accepted on the fourth floor of the ELWC, in the ASBYU Offices, for full-time BYU students interested in helping as a judge for traffic court or working on the staff for the Attorney General's Office, says Christopher Miller, head of Commons Court.

# Universe/COMMENTARY

## U.S. Steel agreement brings needed change

For years, the Geneva plant of U.S. Steel has been criticized for the amount of visual pollution it has created in Utah County. A report that aired several months ago on KUTV in Salt Lake City, claimed that Geneva managed, without the addition of the pollution from automobiles and the other industry in the valley, to exceed the air quality guidelines of the EPA.

Partly because of pollution problems, some businesses have been reluctant to locate in Utah Valley because of the quality of the environment. Despite the pluses of family-centered ideals, friendly inhabitants, strong educational facilities, and nearby recreational areas, the difficulties of sight and odor from Geneva have prevented the influx of new businesses in the past.

With the recently announced agreement between U.S. Steel and the EPA, a portion of the \$18 million fine levied against U.S. Steel by the EPA for pollution problems at some of their Pennsylvania plants will be spent at the Geneva Works to install emission control devices on the four coke batteries at Geneva Works. The tentative deadline for the completion of this project is the end of 1982, according to a spokesman for U.S. Steel. As a result, Utah Valley will find its air cleaner and sweeter smelling.

The Universe has commented in the past about the problems with air pollution at the Geneva plant. The announcement that more money is to be spent to curtail that problem is greatly welcome, not only for its esthetic improvement, but for the improved opportunities for Utah Valley to draw new business enterprise into the area.

HAUPT

## Summer dating idea

You've been reading the editorial page in the Universe and much to your surprise you learn coeds think RM's on campus are dull dates. Well here is the answer to your troubles. The Drive-in theater. No, I'm not kidding. (Well, maybe I am.)

Stifle that laugh and consider the advantages. Think how you'll impress that "Sweet Young Thing" with your financial status when you buy hotdogs for a dollar each. If you really want to get her attention purchase the house specialty, the combination pizza with nothing on it.

Of course a date of this quality will require a little preparation. Naturally you can't attend the drive-in in an ordinary automobile. What you need is the coolest rig in the state. The current rage is the 4X4 pickup truck with wide tires, deep dish Crager mags washed in Joy so you can see yourself, a 38-foot-high CB antenna, fog lamps and a mountain scene frosted on the rear window.

If you don't have the money or inclination to look like a member of the Provo jetset you do have one other choice. The other cliché at the drive-in arrives in antiques, the early ugly variety.

It's really easy to convert your 1979 Camaro into a suitable vehicle for your adventure into the world of outdoor movies. All it takes is several hours with an electric sander and a trip to the garbage dump for a set of bald tires. Don't forget to buy a can of red primer paint to cover those spots you can't reach with the sander.

EDITOR'S NOTE: Readers are encouraged to send letters to the editor commenting on the affairs of the day. All letters submitted should be typed, double- or triple-spaced on one side of the paper and must include the writer's name, signature, home town and local phone number. Handwritten letters will not be considered. Because of the volume of letters received, The Universe cannot publish all comments, and all letters are subject to editing for space requirements or libel. Letters will be edited so as to not change the writer's meaning. Preference will be given to letters that are 250 words or less.

All letters should be brought to 538 ELWC by 10 a.m. the day before publication, or can be mailed. Editorial pages are published on Tuesdays. Unsigned editorials reflect the position of the Universe Editorial Board and are not necessarily those of BYU or the Church of Jesus Christ of Latter-day Saints.

To the Editors:

### Japanese trade

With all deference for our friend from Japan, the Japanese propensity to save is not central to the trade deficit issue. That the Japanese spend only 75 percent of their disposable income may explain why Japan's economy has expanded so rapidly (since goods not consumed are capital goods, postponing consumption leads to capital investment and greater productive capacity), but it does not account sufficiently for the persistent U.S. trade deficit with Japan.

The truth is that the whole Western world is a little put out with Japan, not because her people are thrifty, but because she refuses to reciprocate the goodwill of her industrial counterparts by dismantling her oppressive tariff system.

The advanced nations of the world are faced presently with some very great economic challenges, inflation and OPEC among them. Cooperation has never been so well-advised as at this time, yet Japan continues to treat international trade as a one-way street. Can the U.S. and other western nations be blamed for crying "foul" as

their trade deficits with Japan mount?

Hopefully Japan will come to her senses before her trading partners introduce retaliatory tariffs, since unimpeded international trade means a better standard of living for us all.

M. Schofield  
Lancaster, Calif.

### Energy conservation

Rising gasoline prices and fuel shortages are here to stay, and it's about time the American people did something to start conserving the energy resources we have. Our love affairs with our automobiles have got to stop. We have to turn to alternate methods of transportation, with mass transit the long-range solution. But until mass transit systems can be incorporated, we must do other things to conserve, such as driving less and car pooling.

I propose that BYU encourage car pooling by designating all inner campus parking spaces as "car pool" spaces. Stickers could be issued to car poolers; only cars with four or more passengers in the car would be allowed access to inner campus parking. Enforcement would be routine since security already posts officers at the entrances of the university. Of course, exceptions for the handicapped and visitors would have to be made.

Admittedly, the plan involves sacrifices, but we have to realize that any solution to the energy problem is going to involve sacrifices. The sacrifices involved are minimal compared to the benefits that can be gained from successful implementation of this plan.

I feel this suggestion is particularly pertinent considering the recent suggestion by the First Presidency to conserve our energy resources wherever possible. For those administrators and

faculty members that simply will not or can not give up the luxury and convenience of driving their own automobile, there would still be plenty of outside parking areas available. Isn't it about time we did our part to conserve fuel?

Mark Campbell  
Sacramento, Calif.

### 'Hotrodding.'

There is something perverse and incongruous about publishing statements from the First Presidency, concerning energy conservation, articles calling for gas rationing, and written facts about the serious shortage America is going to face while at the same time praising the efforts of those at the "Mini Indy." While it was great to get 200.4 mpg in the car entered by the University of Cincinnati, my question is why did they have to race at all? Especially in "hotrods?" Next time, be sure not to print the articles in the same issue.

W. Stanley Kell  
Chattanooga, Tenn.

### Shrimp steak

I enjoyed the article by Lee Warnick in the May 22 issue of the Universe, on "Mormon Dialect." It reminded me of an episode in Mexico City in about 1966. When the first Stake was organized in Mexico (other than the Juarez Stake which was over 100 years old) a Stake House needed to be built. It was built with all hand labor by the members, and our family put in many hours in jobs like mixing concrete and carrying it up on top of the building in buckets, etc. It was built in an area, and on a street, named "camarones," which means "shrimp," so it was named the "Camarones Stake House." After it was finished, the stake had a celebration, with bazaar and the

works. Someone decided to put a notice of the celebration in the Daily English Newspaper. The notice read: Big celebration in the Camarones Steak House. A lot of people showed up to enjoy, and to see what kind of steaks could be cut from shrimp.

Murlyn L. Brown  
Orem, Utah

### Where Are They Now?

Where are all those militant Iranians, who wracked their collective craniums? On the issue of freedom and human rights, they often had the Shah in gun sights. Was the old shah really that mean and bad, that his statue was toppled and dragged? When compared to the Ayatollah Khomeini, the Shah's regime was milk and honey. But though many are jailed and murdered, the "students" remain silent and perjured. Basic human rights are viable and effective, only if you back a leftist collective.

Justin Haughmann  
Provo, Utah

### Credit card difficulties

Since May 1, the Universe has run a full-page advertisement on the availability around campus of American Express Card applications. However, there are no applications on campus and I doubt that there ever have been any.

As soon as the ad appeared my husband and I tried to locate an application or even an empty display. We have searched bulletin boards all over campus — including "the Student Center" and many "other locations around campus" according to the instructions in the ad, and found none. We have asked for them at Wilkinson Center Information, Bookstore Information, ASB Information, and many other locations, but no one knows where they are. The Universe advertiser who managed the placement of the ad had no idea where the applications were located, but told me he would try to find out. After trying for one week to contact this advertiser again I have been told that there aren't any applications on campus, so there must not be any left, and that I should look for them at a bank. This is very frustrating because the applications which were advertised are tailored especially to graduates so that the American Express Card would be easier for them to get. Banks do not have these applications — in fact the banks here in Provo do not have any applications.

The advertisement in the Universe stated, "It'll be tougher later, so look for this display in the Student Center and other locations around campus." I wonder how much tougher even finding an application can get!

Wendy Aylworth  
Provo, Utah

### Children tours

I would like to say that I am very frustrated at the number of noisy grade school children and cub scouts allowed to tour the BYU school facilities. For example: many groups of these children have been touring the Eyring Science Center. I would be happy to

## Y's best year for athletics

This has been perhaps the best year for intercollegiate athletics in BYU history — at least in the number of WAC championships won.

BYU's Cougar men won championships in football, basketball, swimming, wrestling and baseball, and for the title in tennis. BYU golfer and trackmen were in NCAA competition as of this writing.

BYU women tennis players swept the region and are expected to finish very high nationally, perhaps second or third. The women's basketball team went into postseason play.

Back in 1971 BYU men won six conference titles, but these did not include football and basketball the same year.

However, regardless of what has happened year by year in individual sports, BYU's total athletic program has been remarkably strong and balanced. The Knoxville Journal in Tennessee rates colleges throughout the nation on their total athletic program a rating based on many factors. The Journal has placed BYU among the top five colleges every year since it began the rating in 1971, and last year rated BYU fourth — a half point behind Arizona State.

Certainly intercollegiate sports serve an important function here at BYU. It challenges hundreds of young men and women to play as teammates. The Cougar teams give spectators something beyond themselves with which to identify . . . a common bond of interest in the university, the valley and the BYU community worldwide.

But intercollegiate athletics is not without problems. On some campuses it apparently just about runs the university. The pressure from fans sometimes tempts coaches to do some questionable things. As is generally understood, football and basketball are the biggies in college sports. Thousands of fans who go to cheer their team to victory provide the dollar that, added to student fees, largely underwrite the university's total athletic program.

Because BYU is very different from many other big universities, it has been able to attract fine athletes without resorting to questionable recruiting practices. It has been able to educate its enthusiastic downtown boosters on what they can and cannot properly do to lure promising young athletes to BYU and in other ways support the Cougar athletic program.

We all want badly for BYU to win. But in our elation over winning this year, we should remind ourselves the Cougar teams will certainly lose sometimes in the future. And when we lose, we Cougar boosters should not become unreasonable.

The BYU administration has made it very clear that BYU must continue to be above reproach in its recruiting practices. Doing that may lose us talented athlete sometime in the future . . . and certainly some games. Above all universities, BYU simply cannot think about bending the rules to win . . . even in the slightest. Even losing would be a small price to pay to keep BYU as an institution the world can look up to.

Edwin O. Haroldson  
Department of Communication

The Universe advertiser who managed the placement of the ad had no idea where the applications were located, but told me he would try to find out. After trying for one week to contact this advertiser again I have been told that there aren't any applications on campus, so there must not be any left, and that I should look for them at a bank. This is very frustrating because the applications which were advertised are tailored especially to graduates so that the American Express Card would be easier for them to get. Banks do not have these applications — in fact the banks here in Provo do not have any applications.

The advertisement in the Universe stated, "It'll be tougher later, so look for this display in the Student Center and other locations around campus." I wonder how much tougher even finding an application can get!

### Children tours

I would like to say that I am very frustrated at the number of noisy grade school children and cub scouts allowed to tour the BYU school facilities. For example: many groups of these children have been touring the Eyring Science Center. I would be happy to

allow these children to see the fossil collections, etc. found in this building because it does house much educational material. I am not in favor of allowing these children, however, to distract those college students who are in classes trying to hear a lecture or the students trying to study. I feel that the BYU facilities are for the college people first and that these university facilities ought to be shared with others — on the condition that the visitors respect the rights of those who are at BYU to learn and work.

Of the many groups of grade school students (and cub scouts) touring this building I feel they have strongly abused this privilege offered by BYU. The children yell at each other, run races in the halls, open classroom doors where classes are in session, and have fist fights in the building. The distractions they create are not conducive to learning for the college students. The elementary teachers accompanying the children are very inadequate in controlling them. (I suggest the teachers learn to control their class BEFORE attempting a field trip which imposes on the rights of the college students.)

I'd also like to point out that with the lack of proper supervision shown so far from these teachers over the children, there is a good possibility some child will get hurt. I have seen some children dangling from the stairway railings on the second floor the ESC while the accompanying teachers took no concern for the children's safety.

I feel that the departments must exercise control over these visiting groups. And by all means, when the children are noisy, ask them to leave the building! Perhaps then, with the threat of being told to leave, the teachers will then find to control the yelling, running, and fighting.
